W_WEIGHT

Weight

Weight

Numeric variable. This weight is aimed at adjusting some sociodemographic characteristics in the sample population to the distribution of the target population. It has been computed using the marginal distribution of Age, Sex, Education and Region.

S018

Equilibrated weight-1000

Equilibrated weight-1000

Numeric variable [makes the sample size of all countries equal to the same amount of N=1000]. Equilibrated weights have been calculated using the formula: 1.000/sample size. Equilibrated weight can be used when all countries and territories involved in the analysis are required to be treated as equal units, regardless of their population or sample size. The weights to be used are the product of the W_WEIGHT and S018.

Country-specific education levels (Q275A, Q276A, Q277Q, Q278A)

Country-specific education levels – highest education level attained by the respondent; spouse; mother; father – are coded using scales provided by the national survey teams. Subsequent versions of the WVS data-set might include further updates. Countries surveyed, but not listed here means: the national team made a choice to use only international ISCED-2011 classification (coded in variables Q275, Q276, Q277, Q278).

Racial and ethnic belonging (Q290)

This question is country-specific which includes both levels of the characteristic (coding either race or ethnic belonging depending on the country) and the adaptation of the scale by each survey team. Races are coded using single cross-country scale while for ethnicity every country proposed their own scale. Subsequent versions of the WVS data-set might include further updates.
